To whom it may concern:

LETTER OF RECOMMENDATION

I am pleased to recommend Jusuf Dacić, who completed 160 hours of professional practice in the IT Department of the Central Bank of Bosnia and Herzegovina from 11 May to 5 June 2026. During this four-week placement, I had the opportunity to observe his work and professional conduct.

The placement gave Jusuf a structured introduction to the Central Bank's legal and organizational framework and to the responsibilities of its departments. Within the IT Department, he became acquainted with hardware and software maintenance, application development and maintenance, and computer systems and networks. He also spent time with colleagues in these areas and learned how their responsibilities support the Bank's daily operations.

His work programme also covered information security governance and the responsibilities of the Chief Information Security Officer, including security policies and risk assessment. He was introduced to the role of the IT architect and the Head of the IT Department, as well as to the Bank's intranet and the IMS system used to register and manage problems, errors, incidents and service requests.

Jusuf also became familiar with BRIS, the Bank's core banking and accounting system, and with the basic functions of the Payment Systems Department. These activities helped him understand how infrastructure, applications, information security, service management and payment processes are connected within a central bank.

Throughout the placement, Jusuf showed genuine interest, motivation and a responsible attitude. He participated actively in discussions, cooperated well with colleagues, completed assigned activities on time and documented his work. He approached new topics carefully and demonstrated a willingness to learn from both technical and organizational perspectives.

Based on his performance during the placement, I recommend Jusuf for academic or professional opportunities in information technology, information systems and related fields. I believe his reliability, curiosity and ability to work constructively with others will make him a valuable member of any team.

Sincerely,

Lamija Čemalović

Expert for IT architecture

Information Technology Department

Central Bank of Bosnia and Herzegovina
